PROFESSIONAL PROFILE

Computer Science graduate with a 2:1 degree and practical software engineering experience across design, implementation, testing, debugging and delivery. Program in Python, C, JavaScript and TypeScript, with experience building API-driven systems, working with relational databases and supporting automated build workflows in a collaborative team. Enjoy investigating how software works, breaking problems into clear steps and improving reliability through testing and careful review. Seeking a long-term software development career focused on systems, networking and large-scale production software.

TECHNICAL SKILLS

Programming: Python, C, JavaScript, TypeScript, SQL, HTML5, CSS3

Software engineering: Object-oriented programming, algorithms and data structures, modular design, debugging, code review workflows, technical documentation

Testing and quality: Automated and functional testing, API testing, validation, defect reproduction, edge-case analysis, Postman

Systems and tools: Windows, Git, GitHub, GitLab, command line, GitHub Actions, GitLab CI, Docker fundamentals

Applications and data: Django, Django REST Framework, React, Next.js, REST APIs, JSON, PostgreSQL, SQLite, MySQL

Ways of working: Agile, Scrum, Kanban, JIRA, collaborative problem solving, continuous learning

PROFESSIONAL EXPERIENCE

Software Engineer Intern | Rootspace.com | Sep 2025 - Aug 2026

- Developed and maintained application features using Python and JavaScript within a collaborative software engineering workflow.
- Worked across the development lifecycle by clarifying requirements, implementing changes, testing behaviour, debugging defects and documenting completed work.
- Built and integrated REST API functionality, processed JSON requests and worked with SQL-backed records to support reliable application workflows.
- Supported automated build and delivery activities using Git feature branches and CI workflows; incorporated peer feedback before changes were prepared for release.
- Investigated issues across application, API and database layers and recorded reproducible steps, outcomes and troubleshooting guidance for the team.

Independent Software Developer | Client and portfolio projects | Jan 2024 - Present

- Design and build full-stack applications from initial requirements through implementation, testing and deployment using Python, React, TypeScript and SQL.
- Use Git to manage incremental changes, review application behaviour and resolve build, integration and runtime issues across frontend and backend components.
- Use AI-assisted development tools to explore approaches while taking responsibility for reviewing, testing and validating all generated code.

IT Support Intern | AppTech, Lagos | Jun 2022 - Aug 2023

- Diagnosed software, hardware and connectivity issues using structured troubleshooting and worked with developers to reproduce defects and verify fixes.
- Supported software installations and updates, completed basic SQL record checks and explained technical solutions clearly to users and colleagues.

SELECTED SOFTWARE PROJECTS

ShareBite Food Donation Platform

Python, Django REST Framework, React, TypeScript, SQL | 2025

- Designed a full-stack application with authentication, role-based permissions, reservation, proof and delivery workflows connecting donors and recipients.
- Created relational models and REST endpoints, applied validation and resolved data-consistency and frontend-to-API integration issues.
- Built and ran automated backend tests covering core API behaviour, with all 10 project tests passing, alongside manual browser and Postman checks.

CNN Pothole Detection

Python, TensorFlow, Keras, OpenCV | University project

- Developed a computer-vision prototype for classifying road images, including preprocessing, augmentation, model training and evaluation.
- Analysed confusion-matrix results and prediction errors, documented limitations and proposed improvements to data quality and model reliability.

JobGenie Resume Application

Python, Django REST Framework, React, TypeScript | 2025

- Developed an API-driven application for structured resume data using serializers, request validation, error handling and a responsive user interface.
- Separated frontend and backend responsibilities, managed environment configuration and tested API responses throughout iterative development.

ToksMimi Foods Client Platform

Next.js, React, TypeScript | 2025

- Built a responsive product platform from client requirements, including catalogue search, filtering, product details and a persistent shopping basket.
- Created reusable components, managed browser and query parameter state and resolved build and interface defects through controlled Git changes.

Momentum Productivity Application

Python, Django, React, PostgreSQL | 2026 - Present

- Designed a goal and task application with progress calculations and lifecycle states backed by a relational PostgreSQL data model.
- Established the frontend and backend structure, environment configuration and Git baseline for incremental development.

EDUCATION

BSc Honours Computer Science, 2:1 | University of Bolton | Graduated July 2025

Relevant study: software engineering, object-oriented programming, algorithms and data structures, databases, operating systems, networking, web development and machine learning.

Professional Diploma in Information Technology | NIIT Port Harcourt | Aug 2020 - Dec 2022

ADDITIONAL INFORMATION

Work authorisation: Valid UK Graduate Route permission.

Driving: Full UK manual driving licence.

Technical interests: Systems programming, networking software, reliable distributed systems and AI-assisted software engineering.
